

National Aeronautics and
Space Administration

New Space Age

NASA's Commercial Crew Program spacecraft and rockets will carry up to four astronauts and about 220 pounds of cargo to and from the International Space Station. Commercial crew will resume human spaceflight launches from the United States and provide the nation with two unique spacecraft, two human-rated rockets and the necessary ground support systems. NASA and our commercial partners, Boeing and SpaceX, are working together to open access to low-Earth orbit.
